1. Part-1

```
package CountryDemo.services;
import java.sql.*;
public class DBUtil {
    private static Connection connection = null;
    private DBUtil() {} // Constructor
    public static Connection getConnection() throws SQLException
    {
        if (connection == null)
        {
            String username = "root";
            String password = "Ironm@n101";
            String url = "jdbc:mysql://localhost:3306/HR";
            // Creating the connection
            connection = DriverManager.getConnection(url,
username, password);
        }
        return connection;
    }
}
```

1. Part-2

```
package CountryDemo.CountryDemo;
import CountryDemo.services.DBUtil;
import java.sql.Connection;
import java.sql.ResultSet;
import java.sql.SQLException;
import java.sql.Statement;
public class CountryDemo {
  public static class CountryServices {
    public static void main(String[] args)
    {
      String sql = "select country_name from countries";
      try(Connection connection = DBUtil.getConnection();
        Statement statement = connection.createStatement()){
    ResultSet resultSet = statement.executeQuery(sql); // In case of select executeQuery is used
    int count = 0;
    while(resultSet.next())
    {
      count++;
      System.out.println(resultSet.getString("country_name"));
    }
    System.out.println(count+ " countries found");
    resultSet.close();
      }catch (SQLException ex)
        System.out.println("Problem:" + ex.getMessage());
    }
```
